

## Precision Flanged Roller End Bearings

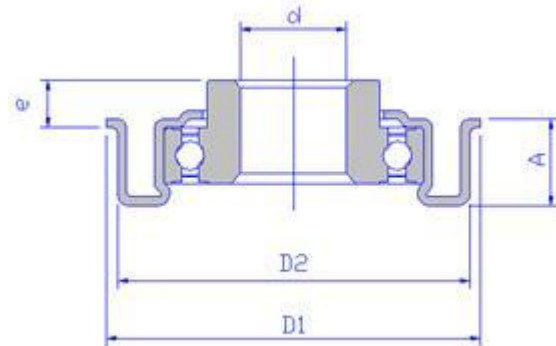

These bearings are assembled with a deep grooved radial precision bearing and have been designed for powered driven roller applications where very low noise levels are desirable.

Increasingly on the more recent additions the insert is manufactured as an integral part of the precision bearing.

Flanged bearings are designed to to be swaged into EWR tube.

Note: The spindle extention can vary on certain bearings suffixed \*, please quote spindle extention prior to order.

Standard finish is zinc plated.
